习题 (2.5.1.1). 求解下来微分方程:

$$(3x^2y + 2xy + y^3)dx + (x^2 + y^2)dy = 0.$$

解. 微分方程两边同时乘以非零函数  $u(x, y)$ , 得到

$$u(x, y)(3x^2y + 2xy + y^3)dx + u(x, y)(x^2 + y^2)dy = 0. \quad (1)$$

我们希望 (1) 是恰当的, 即

$$\frac{\partial[u(x, y)(3x^2y + 2xy + y^3)]}{\partial y} = \frac{\partial[u(x, y)(x^2 + y^2)]}{\partial x}. \quad (2)$$

也即,

$$\begin{aligned} & \frac{\partial u(x, y)}{\partial y}(3x^2y + 2xy + y^3) + u(x, y)(3x^2 + 3y^2) \\ &= \frac{\partial u(x, y)}{\partial x}(x^2 + y^2). \end{aligned}$$

当  $x^2 + y^2 \neq 0$  时, 也即

$$\frac{\partial u(x, y)}{\partial y}y(1 + \frac{2x^2 + 2x}{x^2 + y^2}) + 3u(x, y) = \frac{\partial u(x, y)}{\partial x}.$$

让  $u(x, y)$  是只关于  $x$  的函数, 则我们得到

$$3u(x, y) = \frac{\partial u(x, y)}{\partial x},$$

不妨让  $u(x, y) = e^{3x}$ . 因此我们得到恰当微分方程

$$e^{3x}(3x^2y + 2xy + y^3)dx + e^{3x}(x^2 + y^2)dy = 0.$$

设存在二元函数  $\phi(x, y)$ , 使得

$$\frac{\partial \phi}{\partial y} = x^2e^{3x} + y^2e^{3x} \Rightarrow \phi = x^2e^{3x}y + \frac{1}{3}e^{3x}y^3 + f(x). \quad (3)$$

因此

$$f'(x) = 0 \Rightarrow f(x) = C. \quad (4)$$

于是得到通积分

$$\phi \equiv x^2e^{3x}y + \frac{1}{3}e^{3x}y^3 + C = 0. \quad (5)$$
